

ABSTRACT OF THE DISCLOSURE

An input for designating sent-out contents capable of being browsed on a provider-side processing apparatus is accepted. Ticket information for identifying a sending-party of sent-out contents is received from the provider-side processing apparatus. The sent-out contents and the ticket information are transmitted to a deliberation support processing apparatus to request a deliberation about the sent-out contents. The sent-out contents and the ticket information are stored into a deliberation managing database. An input of a deliberation result of the requested deliberation is accepted to store the deliberation result into the deliberation managing database. The ticket information is transmitted to a ticket management processing apparatus. Presentation of personal information on the sending-party is requested. The personal information on the sending-party identified by the ticket information is transmitted to the deliberation support processing apparatus. The deliberation result and the personal information on the sending-party are transmitted to the deliberation-requesting-party-side processing apparatus.
